

Rural Municipality of Fertile Valley No. 285

August 14, 2024

NOTICE TO BIG VALLEY WELL USERS

Second quarter testing was completed for the Big Valley Well. Although the testing showed No Detectable Coliforms or E.Coli and Nitrates were well below the Sask Guideline, a NON-POTABILITY STATUS remains posted due to a Health and Toxicity Panel of tests on July 30, 2024. The Manganese Level is at 0.64 mg/L. The Sask Guideline is <0.05 mg/L. Due to this high level, the water is deemed non-potable.

Signage and information has been posted at the Big Valley Well.
